Mining/Surface – Coal – Working Under Suspended Loads

### Working Under Suspended Loads

30 CFR 77.210

30 CFR 77.1707

Reference Interagency Agreement between the Mine Safety and Health Administration U.S. Department of Labor and the Occupational Safety and Health Administration U.S. Department of Labor. Many MSHA and OSHA standards and requirements are identical in nature and there may be some overlap in enforcement of standards.

When working as an operator in the capacity of an independent contractor performing services or construction at a facility that falls under MSHA standards, the provisions of our safety program apply except as modified below:

Employees must stay clear of hoisted or suspended loads.

Employees are not to work or pass under the buckets or booms of loaders in operations.

Dippers, buckets, loading booms or heavy suspended loads will not be swung over the cabs of haulage vehicles until the drivers are out of their cabs and in a safe location.

**Note: If the haulage vehicles are specifically designed to protect the drivers from falling materials, they may stay in their cabs.**
